Name : Gaurang Tyagi

Roll No : 16

Practical 2 : Email Header Analysis

Task 1 : Finding the Full Email Header

- Before analysis can begin, locate the full email header in your email client (Gmail/Outlook). The method differs depending on the platform. **header**

```

Result of steps 2,3 and 4

1. Step 2 : Record the top-level metadata.

question	answer
message id	20230919183549.39DEA3F725@ubuntu-s-1vcpu-1gb-35gb-intel-sfo3-06
Subject	CLIENTE PRIME - BRADESCO LIVELO: Seu cartão tem 92.990 pontos LIVELO expirando hoje!
Date	2023-09-19T18:35:49Z
from	banco.bradesco@atendimento.com.br

question	answer
to	phishing@pot
return-path	root@ubuntu-s-1vcpu-1gb-35gb-intel-sfo3-06
MIME type	text/html; charset="utf-8"
body encoding	base64

2. Step 3 : List every MIME part, attachment, embedded object or referenced resource.

question	answer
MIME version	1.0
Content Type	text/html; charset=UTF-8
Content Transfer Encoding	base64
Attachment	None
Embedded Objects	header.png,icone-superior.png,icone-rodape.png

question	answer
Referenced Resource	https://blog1seguimentmydomaine2bra.me/,https://fonts.googleapis.com/css2?family=Signika,https://fonts.gstatic.com

3. Step 4 : Extract all URLs,domains,email addresses and any observable filenames

question	answer
URLs	https://blog1seguimentmydomaine2bra.me/
Domains	blog1seguimentmydomaine2bra.me,fonts.googleapis.com,fonts.gstatic.com,atendimento.com.br,outlook.com,offic
Email Addresses	base64banco.bradesco@atendimento.com.br,phishing@pot,root@ubuntu-s-1vcpu-1gb-35gb-intel-sfo3-06
Observable filename	header.png,icone-superior.png,icone-rodape.png

Task 3 : Header analysis with MX Toolbox

question	answer
Displayed from the address	banco.bradesco@atendimento.com.br
Return Path	root@ubuntu-s-1vcpu-1gb-35gb-intel-sfo3-06
Message ID	20230919183549.39DEA3F725@ubuntu-s-1vcpu-1gb-35gb-intel-sfo3-06
Sending/originating IP	137.184.34.4
Recieved mail servers	ubuntu-s-1vcpu-1gb-35gb-intel-sfo3-06 → BN8NAM11FT066.mail.protection.outlook.com → BN0PR03CA0023.outlook.office365.com → SA3PR19MB7370.namprd19.prod.outlook.com → MN0PR19MB6312.namprd19.prod.outlook.com
SPF result	temperror
DKIM result	none
DMARC result	temperror

1. Is there any mismatch between the displayed sender identity and the actual sender?

```
yes, there is a mismatch between the displayed sender identity
(<banco.bradesco@atendimento.com.br>) and the actual sender (root@ubuntu-s-1vcpu-1gb-35gb-intel-
sfo3-06) which is an indicator of phishing attack.
```

2. State whether the relay path is consistent with the claimed sender brand?

```
No, the relay path is not consistent with the claimed sender brand.
```

3. From the MX Toolbox results in task 3, note whether the SPK, DKIM and DMARC checks passed or failed.

```
SPK check failed
DKIM check failed
DMARC check failed
```

4. Interpret the SPF result and explain what a temperror means operationally.

```
SPF result means the receiving mail server could not complete the SPF check due to a temporary
issue, not because the sender definitively passed or failed.
A temperror (temporary error) occurs when the receiver tries to evaluate the sender’s SPF record
but encounters a transient problem, such as:
1. DNS Lookup timeout
2. Temporary DNS failure
3. Too many DNS lookups in SPF record
4. Network connectivity issues during validation
```

5. Explain the significance of dkim=none for a bank branded message.

```
The result dkim=none indicates that the email is not digitally signed, meaning the sender’s
domain cannot be authenticated and message integrity cannot be verified. For a bank-branded
message, this is highly suspicious, as legitimate financial institutions always use DKIM. Its
absence strongly suggests the email is fraudulent or spoofed.
```

6. Based on your findings, explain below what these results tell you about the legitimacy of the email.

```
Based on the analysis ,the  email is not legitimate as :
1. The sender domain does not match the claimed bank brand, and the message originates from a
suspicious cloud-based host.
2. SPF, DKIM, and DMARC authentication checks all failed or were inconclusive, meaning the
sender cannot be verified.
3. The presence of a suspicious external link further supports that this is a phishing email.
```

Task 4 : Tracing the originating IP address and analysing its reputation

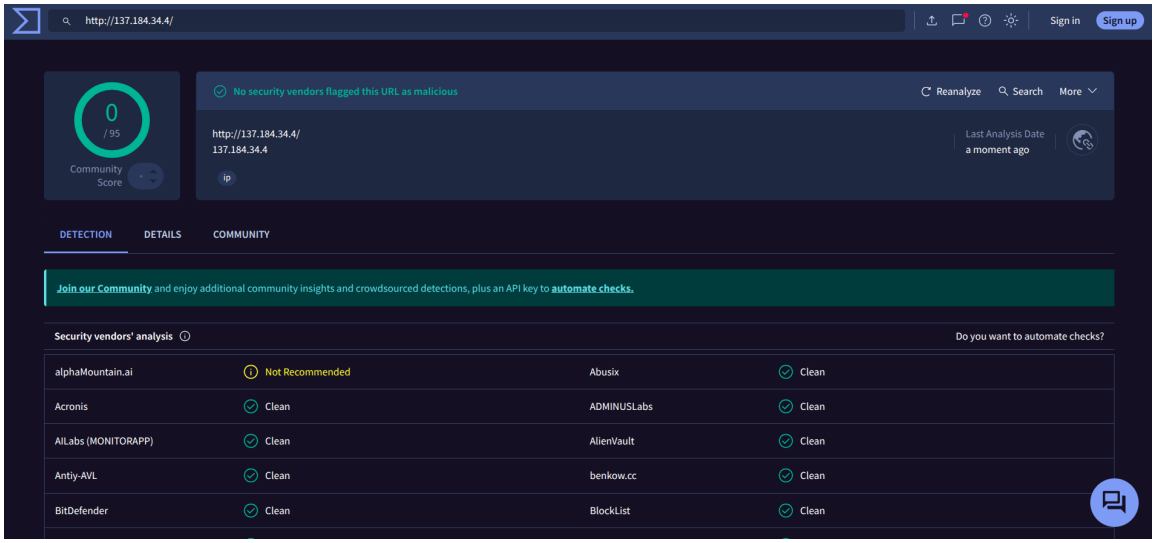
question	answer
Detection Counts	0 user flagged the IP as malicious (according to virustotal)
Reputation Labels	Sender IP reputation : neutral, Web Reputation : neutral
Hosting Provider	Digital Ocean
Any Abuse History	No major abuse flagged in virustotal

1. State whether the IP ownership is compatible with a legitimate Bradesco/Livelo campaign.

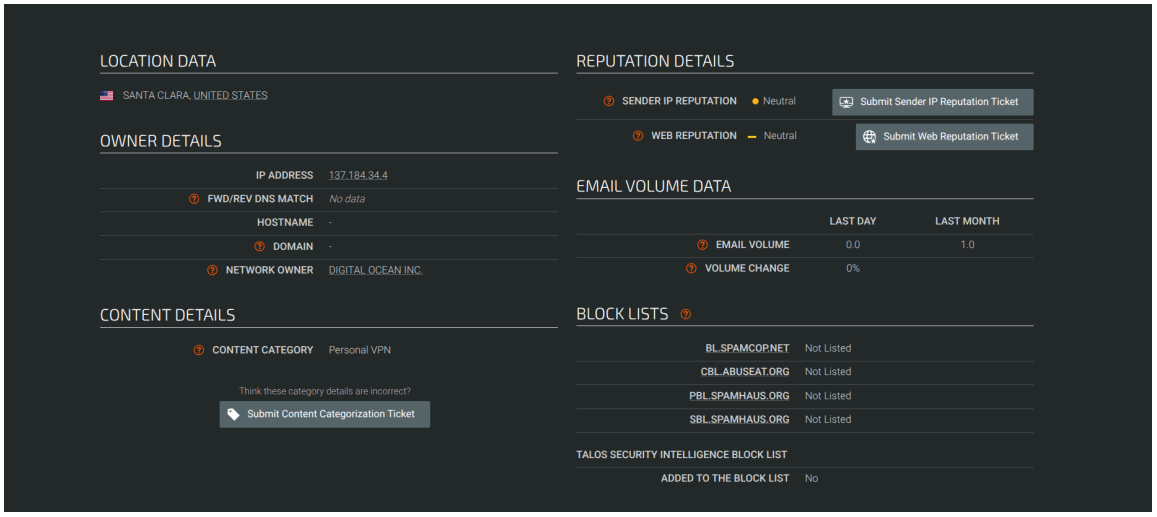
```
No, the IP ownership is not campatible with a legitimate Bradesco/Livelo campaign as the IP
ownership is not compatible with a legitimate Bradesco/Livelo campaign. The originating IP
(137.184.34.4) is owned by DigitalOcean, a cloud hosting provider, rather than a trusted banking
mail infrastructure. Legitimate financial institutions use dedicated, authenticated mail servers
with proper domain alignment, not generic VPS environments.
```

5. Paste a screenshot of the IP lookup results below and submit.

virustotal



Cisco talos



Task 5: Domain ownership and URL/Domain analysis

1. Run WHOIS for:
    - atendimento.com.br
    - blog1seguimentmydomaine2bra.me
2. Record :

- atendimento.com.br

question	answer
Registrar	Registro.br
Creation Date	20 September, 2018
Expiry Date	20 September,2027
Available Ownership Clues	Registrant Name : Maximilian Gregory Peisker Lacerda, Country : Brazil (BR), Email : kaerjek@yahoo.com.br, Name Servers : ns822.hostgator.com.br,ns823.hostgator.com.br, Hosting clue : HostGator

- blog1seguimentmydomaine2bra.me

>>> Last update of WHOIS database: 2026-04-14T15:09:38Z <<<

Terms of Use: Access to WHOIS information is provided to assist persons in determining the contents of a domain name registration record in the registry database. The data in this record is
provided by Identity Digital or the Registry Operator for informational purposes only, and accuracy is not guaranteed. This service is intended only for query-based access. You agree that yo
u will use this data only for lawful purposes and that, under no circumstances will you use this data to (a) allow, enable, or otherwise support the transmission by e-mail, telephone, or fac
simile of mass unsolicited, commercial advertising or solicitations to entities other than the data recipient's own existing customers; or (b) enable high volume, automated, electronic proce
sses that send queries or data to the systems of Registry Operator, a Registrar, or Identity Digital except as reasonably necessary to register domain names or modify existing registrations.
 When using the Whois service, please consider the following: The Whois service is not a replacement for standard EPP commands to the SRS service. Whois is not considered authoritative for r
egistered domain objects. The Whois service may be scheduled for downtime during production or OT&E maintenance periods. Queries to the Whois services are throttled. If too many queries are
received from a single IP address within a specified time, the service will begin to reject further queries for a period of time to prevent disruption of Whois service access. Abuse of the W
hois system through data mining is mitigated by detecting and limiting bulk query access from single sources. Where applicable, the presence of a [Non-Public Data] tag indicates that such da
ta is not made publicly available due to applicable data privacy laws or requirements. Should you wish to contact the registrant, please refer to the Whois records available through the regi
strar URL listed above. Access to non-public data may be provided, upon request, where it can be re
asonably confirmed that the requester holds a specific legitimate interest and a proper legal basis for accessing the withheld data. Access to this data provided by Identity Digital can be r
equested by submitting a request via the form found at https://www.identity.digital/about/policies/whois-layered-access/. The Registrar of Record identified in this output may have an RDDS s
ervice that can be queried for additional information on how to contact the Registrant, Admin, or Tech contact of the queried domain name. Identity Digital Inc. and Registry Operator reserve
 the right to modify these terms at any time. By submitting this query, you agree to abide by this policy.
```

3. Submit the extracted URL to urlscan.io and record the following

- atendimento.com.br

question	answer
Redirects	0
Resolves	4
is already known as malicious or suspiciour	yes (not right now but in the past)
The landing domain matches the claimed brand	No

- blog1seguimentmydomaine2bra.me

question	answer
Redirects	0
Resolves	5
is already known as malicious or suspiciour	yes (not right now but in the past)
The landing domain matches the claimed brand	No

Final Questions

1. Why is a From vs Return-Path mismatch important in phishing analysis?

```
A mismatch between the From address and the Return-Path indicates that the visible sender is
different from the actual sending source. Legitimate organizations typically align these fields,
while attackers spoof the From address to impersonate trusted brands. Therefore, such a mismatch
is a strong indicator of phishing or email spoofing.
```

2. What does dkim=none suggest in the context of this example?

```
The result dkim=none indicates that the email is not digitally signed, meaning the sender’s
domain cannot be authenticated and message integrity cannot be verified. In the context of a
bank-branded message, this is highly suspicious, as legitimate financial institutions always use
DKIM. Its absence strongly suggests the email is fraudulent.
```

3. How should an analyst treat SPF/ DMARC temperror as compared to explicit fail or pass results ?

```
A temperror indicates a temporary issue (e.g., DNS timeout) preventing proper authentication.
While it is not an explicit failure, it should not be treated as a pass. Analysts should
consider it inconclusive but suspicious, especially when combined with other red flags. In
phishing analysis, temperror is often treated similarly to a soft failure.
```

4. Which observations in this sample are strongest for enterprise blocking and threat hunting ?

```
The strongest indicators include:

The phishing URL/domain (blog1seguimentmydomaine2bra.me)
The originating IP address (137.184.34.4)
The spoofed sender domain (atendimento.com.br)
The suspicious certificate domain (mercadoturbo.com.br)
```

```
Authentication failures (DKIM=none, SPF/DMARC temperror)

These indicators can be used for blocking, detection rules, and threat hunting across enterprise
systems.
```
